

M. Ermelinda S. Eusébio received her Ph.D. in Chemical Thermodynamics from the University of Coimbra, Portugal, in 1995, and is currently Associate Professor at the Chemistry Department of this University. She is the coordinator of the *Laboratory of Thermodynamics and Solid State Chemistry* of the *Coimbra Chemistry Centre-IMS* research Centre. Her scientific interests have been mainly directed towards the investigation of solid forms of organic compounds: design, screening, selective preparation and performance evaluation, with particular focus on polymorphs, co-crystals and co-amorphous phases of active pharmaceutical ingredients. In her investigation she has been using a thermodynamic based approach, complemented with other methods.
